ROHIT PRASHAR

Senior Lead Consultant

PROFESSIONAL SUMMARY

Senior Lead Consultant and Architect with 11+ years of experience designing, coding, and delivering enterprise-scale systems serving millions of users across diverse domains including government, financial services, logistics, and retail. Deep technical expertise spanning AI-powered platforms, distributed microservices, event-driven architectures, and full-stack applications built with Java, Python, React, and cloud-native technologies. Proven track record of architecting solutions from concept to production while maintaining active development contributions - delivering measurable business impact: 80% faster processing times, 70% cost reductions, and 99.99% uptime. Experienced in complex integrations across banking systems, legal platforms, supply chain networks, and retail ecosystems. Led cross-functional teams of 5-15 engineers while driving digital transformation initiatives, combining strategic architectural vision with practical coding expertise across regulated industries

EMPLOYMENT HISTORY

SENIOR LEAD CONSULTANT **2020 - Present**

Ministry of Justice - Scrumconnect ***Croydon, UK***

AI-Powered Legal Document Intelligence Platform

- Architected and delivered enterprise AI platform processing 1M+ legal documents daily, reducing judge case review time by 80% (6 hours to 1.2 hours) and improving decision accuracy by 25% through intelligent document summarization and RAG system implementation
- Scaled AI platform across multiple HMCTS departments enabling document classification, evidence analysis, and case prioritization use cases, leading to successful integration by 3 additional government projects and securing £5M+ in follow-up contracts
- Led cross-functional team of 8 engineers while convincing Technical Advisory Board (TAB) to adopt AI-first approach, establishing architectural standards that became the blueprint for government AI initiatives across 5 departments
- Implemented AI-powered testing automation reducing manual test case generation by 60% and improving test coverage through intelligent test data synthesis and edge case identification
- Led cross-functional development teams to deliver robust digital solutions, driving substantial improvements in service efficiency for the Ministry of Justice.
- **DevOps Transformation & Platform Optimization**
- Introduced trunk-based development across 40+ microservices, reducing Azure DevOps pipeline execution time by 85% (60 minutes to 10 minutes average) through optimized integration testing, dependency caching, and parallel build strategies
- Identified and resolved architectural bottlenecks by simplifying unnecessary CQRS implementations, migrating internal API calls to gRPC, optimizing heavy payloads, and converting synchronous operations to asynchronous patterns where appropriate
- Enhanced system performance through intelligent caching logic, connection pooling optimization, query simplification, reduced unnecessary polling, and comprehensive observability improvements, resulting in 45% reduction in system latency
- Migrated compute-intensive operations to Azure Functions serverless architecture with smart polling techniques, reducing infrastructure costs by 30% while improving response times by 25%
- **Crime Management Platform Architecture**
- Architected event-sourced microservices platform handling 500K+ sensitive case records with 99.99% uptime, ensuring full auditability and GDPR compliance for UK judicial system
- Designed custom dead letter queue management system improving system reliability by 35% and reducing data processing failures from 5% to 0.2%

- Led platform modernization from Java 8 to Java 17 and containerization initiative, improving build performance by 40% and reducing infrastructure costs by 25%

SPECIALIST PROGRAMMER **2020**
Infosys ***Bengaluru, India***

Cloud Cost Optimization Platform

- Built enterprise cloud cost management platform for Fortune 500 clients, providing real-time visibility into $10M+ monthly cloud spend and enabling 20-30% cost optimization through predictive analytics
- Architected React-based dashboard with Spring Boot microservices backend, serving 1000+ enterprise users with sub-second response times and 99.95% availability
- Established technical leadership for 6-person development team, implementing agile practices that improved delivery velocity by 40% and reduced defect rates by 50%

SENIOR SOFTWARE DEVELOPER **2016 - 2020**
Manhattan Associates ***Bangalore, India***

Supply Chain Management & Digital Payments Platform

- Led architectural transformation of monolithic WMS to cloud-native microservices serving 200+ distribution centers globally, achieving 99.99% uptime and supporting $1B+ in daily transactions
- Architected secure payment processing system with KYC/AML compliance integrating core banking APIs and third-party payment gateways, handling 50K+ daily transactions with 99.95% success rate and PCI-DSS certification
- Implemented AI-powered fraud detection algorithms reducing false positives by 40% and improving transaction approval rates by 15% through machine learning pattern recognition and behavioral analysis
- Designed event-driven architecture with intelligent caching and connection pooling, reducing system response times by 70% (5 seconds to 1.5 seconds) while enabling real-time payment reconciliation
- Collaborated with banking stakeholders in agile product development cycles, translating complex regulatory requirements into scalable microservices architecture supporting multiple payment methods and personalized user experiences

PROGRAMMER ANALYST **2014 - 2016**
Cognizant Technology Solutions ***Chennai, India***

Retail Planning & Optimization Platform

- Developed high-performance retail planning modules serving 500+ stores, improving inventory forecast accuracy by 35% and reducing stockout incidents by 28%
- Optimised legacy Java applications reducing page load times by 45% and database query performance by 60% through strategic caching and query optimisation
- Implemented API versioning strategy enabling seamless integration with 10+ downstream systems while maintaining backward compatibility

SKILLS

Java (8, 17, 21), Python, Spring, Spring Boot, Spring Cloud, Restful Api's, GraphQL, grpc, JavaScript, TypeScript, NodeJs, React, Azure, Azure Functions, Aws Lambdas, Azure Devops, Azure Storage, Aws S3, Azure Event Bus, Docker, Kubernetes, ActiveMq, Kafka, Prometheus, Grafana, ELK Stack, JUnit, Mockito, Data Analysis, Fast API,Numpy,Pandas,, ELT with Spark and Python, Maven,Gradle, Microservices, CQRS, Event Sourcing, Ai/ML,Vector DB, Postgres MySql, MongoDb, Redis.

EDUCATION

BACHELOR OF ENGINEERING IN COMPUTER SCIENCE **2009 - 2013**
NAGPUR UNIVERSITY ***India***

COURSES

AZURE DEVELOPER ASSOCIATE **Dec 2024 - Dec 2025**
Microsoft

DATA ENGINEER ASSOCIATE **Nov 2024 - Nov 2026**
Databricks

USING GENERATIVE AI IN AZURE AND MICROSOFT POWER PLATFORM
Microsoft

ADDITIONAL INFORMATION

TECHNICAL ACHIEVEMENTS

- Reduced system latency by 70% across multiple enterprise platforms through architectural optimization
- Delivered 15+ production systems with zero critical security vulnerabilities and full regulatory compliance
- Achieved 99.99% uptime across all architected systems (4-year track record)
- Led successful migration of 8 legacy applications to cloud-native architectures
- Architected payment processing systems handling $1B+ daily transaction volume
- Established architecture standards for secure banking applications adopted by 50+ engineers across organizations

LEADERSHIP & IMPACT

- Mentored 25+ engineers resulting in 12 internal promotions and 95% team satisfaction scores
- Delivered $2M+ in measurable business value through cost optimization and efficiency improvements
- Presented technical solutions to C-level executives across government and enterprise clients
- Established center of excellence for AI/ML development serving 3 business units
